Description

- **Application:** Repair kit for replacing damaged shaft bearings
- **Material:** Robust construction for long-lasting use
- **Height – Center of pipe to lower edge:** 125 mm (**2 7/16"**)
- **Installation:** Easy mounting without removing the drive shaft bearing
- **Special feature:** Protects drives and pipes from wear thanks to a special plastic ring

The **TGU Shaft Bearing Set 1"** is a practical solution for quickly replacing damaged shaft bearings. It allows for simple repairs without the need to dismantle the drive shaft bearing.

Thanks to its sturdy construction, the set is suitable for both new and older greenhouse installations. The integrated plastic ring protects other greenhouse components from wear and abrasion.

The set offers high flexibility for various systems and structures in both modern and older greenhouses. Its innovative design enables a single person to replace brittle, worn shaft bearings with ease.

Another advantage is the time saved: the new shaft bearing is mounted directly around the pipe, eliminating the need for labor-intensive removal of the drive shaft bearing. This makes the replacement process especially efficient and straightforward.

The loose packaging ensures flexible handling and storage, ideal for individual needs and larger installations.
