Description

- **Application area:** Protection of fabric aprons in greenhouses
- **Material:** High-quality PVC for long-lasting use
- **Length:** 5.00 m
- **Installation:** Direct clipping onto the tensioned wire
- **Special feature:** Prevents fabric abrasion caused by direct wire contact

The **PVC clip profile** is an essential component for shading systems in greenhouses. It protects the fabric aprons on slopes by clipping directly onto the tensioned wire, preventing the fabric from resting directly on the wire and being damaged by friction.

Made from high-quality PVC, the clip profile offers a durable and reliable solution for professional greenhouse installations. Its simple clip-on installation allows for quick setup without additional tools.
