Description

- **Application:** Sealing overlap between fabric panels in suspended shading systems
- **Material:** Fabric-compatible plastic
- **Function:** Attached to carrier wire - picks up the following fabric panel via cord for seamless overlap
- **Packaging Unit:** 200 pcs

Sealing bracket for 2 mm stainless steel wire is used to **seal the transition between adjoining fabric panels** in suspended greenhouse shading systems. Made from plastic that protects the screen material, it ensures a gentle yet stable attachment to the carrier wire.

The bracket is mounted directly on the carrier wire and is connected to the next fabric panel using a cord. This creates a consistent overlap between panels that helps minimize light leakage and contributes to a clean and functional screen layout. The same type of wire is also used in some laid screen configurations.
