Description

- **Product:** AquaFloora 200
- **Structure:** Two-layer combination of Aquatex Groundcover 100 and Aquafil 200
- **Material:** High-capillarity irrigation fleece with protective woven PP surface
- **Width:** 150 cm
- **Length:** 50 m
- **Function:** Uniform water retention and distribution
- **Advantages:** Crease-free surface, easy to clean, high water storage capacity

AquaFloora 200 optimizes irrigation on cultivation tables through the seamless fusion of high-capillarity AquaFil irrigation fleece and durable Aquatex Groundcover 100.

The upper woven layer protects against dirt, weed growth, and algae formation, while the lower fleece layer stores water and releases it evenly to the plants.

Thanks to the firm bonding of both materials, the mat remains stable and does not shift. Its smooth surface simplifies cleaning and reduces evaporation.

With a water storage capacity of approx. 3 liters per square meter, AquaFloora 200 is ideal for professional use in nurseries and agricultural operations.
