

Overview

Tube insert 50.2 - with ball bearing 6000 ZZ

Product number: 89110601

Image

Description

- **Application area:** Centered mounting of rolling tubes in horizontal shading systems
- **Suitable for:** Precision tubes Ø 50 mm according to EN 10305-3, Sendzimir galvanized, 2 mm wall thickness
- **Bearing type:** Ball bearing 6000 ZZ with extended inner ring
- **Function:** Serves as a centric bearing inside the tube - no additional spacer required
- **Installation:** Inserted directly into the tube
- **Special features:**
 - Extended inner ring enables play-free mounting
 - Reduces assembly effort and number of components
 - Ideal for durable and low-maintenance rolling tube systems

The **Tube insert 50.2 with bearing 6000 ZZ** is a well-designed component for the centered mounting of rolling tubes. Thanks to the extended inner ring of the integrated ball bearing, there is no need for a separate spacer—saving time during installation and increasing operational reliability. The insert is pushed directly into the 50 mm tube and ensures precise, play-free mounting of the drive shaft.
