Description

- **Application area:** Connection between double film and spiral hose in greenhouse systems
- **Material:** UV-stabilized plastic blend for high durability
- **Function:** EPDM check valve prevents backflow of inflated air
- **Installation:** Secured using a hose clamp
- **Special feature:** Highly resistant to environmental influences

The **Film inflation valve incl. back flow flap** ensures a reliable connection between the double film and spiral hose. The back-flow flap prevents the backflow of already inflated air, maintaining a stable air cushion.

Thanks to the proven plastic blend, the valve is UV-stabilized and exceptionally durable. Installation is quick and secure using a hose clamp.
