• Function: Base for securing the film, fixed with silicone adhesive (Contractors)

• Special feature: Barbs for secure hold during installation

• Advantages: Wind- and weather-resistant, easy to use

The **Lexan film fastener Type 2 - base** serves as the foundation for securely fastening bubble wrap to greenhouse walls. It is fixed in place using silicone adhesive (Contractors) and enables a stable connection of the film to glass or twin-wall sheets.

Once installed, the bubble wrap is pressed onto the base and then firmly sealed with the matching upper part. Thanks to its locking mechanism, the fastener is particularly wind- and weather-resistant. The integrated barb ensures that the film remains securely in place during installation and does not slip.

After frost periods, the upper parts can be easily unscrewed and reused if needed. With a packaging unit of **100 pieces**, the base is ideal for professional use. A proven solution for gardeners and farmers who want to insulate their greenhouses effectively.
