• Application: Chain-driven worm gear for ventilation and energy screens without power supply

• Material: Sturdy build with KST chain wheel and guide

Gear ratio: 1:16 (70 Nm torque)
Chain length: Usable length 2 m

• Features: Low-maintenance and resistant to climate conditions

• Installation: Direct-mount solution for easy connection to the drive shaft

The **Worm drive** is a chain-driven unit ideal for operating ventilation systems and energy screens without electricity. It's especially useful for elevated side vents that can't be reached with a standard crank, and for small to medium greenhouse, barn, or hall installations.

Its rugged design with KST chain wheel and guide ensures durability and reliability. The 1:16 gear ratio delivers 70 Nm of torque, and the 2-meter chain provides ample reach.

Engineered to withstand greenhouse conditions, the system is low-maintenance and installs directly onto the drive shaft for quick setup.
