

Overview

Cable Caddy Twin - Cable Dispenser for wires & cables

Product number: 40110028

Image

Description

Our Cable Caddy Twin is the perfect solution for workshops, construction sites and companies, where you regularly should unwind cable reels of various widths. Thanks to the two-part design, the Cable Caddy Twin gives you maximum flexibility compared to one-part cable dispensers.

Like the one-piece models Cable Caddy Twin simplifies and accelerates the unwinding of wires and ropes on reels. You avoid tangled wires and the subsequent loosening.

We manufacture the Cable Caddy in Germany according to high quality standards providing it with some practical features:

An unscrewable aluminium roll-up ramp supports you upon positioning the reels on the unwinder.

Metal rods stabilize the cable dispenser while the reels are being unwound. We deliver the Cable Caddy with two rods with a length of 900 mm.

Tilting of the cable dispenser is prevented by laterally attached rope pulleys.

Rubber feet firmly hold the dispenser upon rolling and prevent slipping.

The side parts and support rollers are galvanized and thus protected from corrosion.

The side parts are additionally power coated.
