Description

- **Application:** Collects and guides shading screens in greenhouse systems
- **Attachment:** Clamped onto 19 mm aluminum tube using integrated compression lock
- **Function:** Holds the shading fabric securely and ensures smooth retraction
- **Compatibility:** For use with horizontal or suspended screen systems

Cloth retainer 19 is a screen guidance element designed to bundle and stabilize shading fabrics during retraction. It is installed by clamping directly onto a **19 mm aluminum tube**, where the integrated compression mechanism ensures a tight and reliable fit without additional fasteners.

This component helps maintain consistent screen alignment and prevents material sag or misdirection during movement. It's ideal for greenhouse systems requiring reliable cloth collection and stable operating conditions.
