Description

- **Application:** Used in greenhouses with push-pull ventilation drives
- **Material:** Rugged construction for dependable operation
- **Function:** Regulates cloth width where truss spacing is narrower
- **Feature:** Accepts 27 mm and 32 mm push rods
- **Packaging Unit:** 36 pieces

The **Spring Damping Element Ø27-Ø32** is used in push-pull drive systems—particularly where the final truss distance is shorter. It serves as a socket for 27 mm and 32 mm push rods, helping regulate the tension and width of the shading panels.

Its robust design ensures smooth movement and dependable performance, even under high-frequency operation. Perfect for maintaining consistent cloth tracking in tightly spaced installations.
